[1] Drill hole CC25_038 contained two intervals where samples could not be obtained due to loss of recovery during drilling. These intervals occur from 167.50-169.75m (2.25m) and 269.75-270.35m (0.60m). The interval 167.50-169.75 occurs internal to a mineralized core run and has been included in composite calculations but assigned zero assay values for copper, gold, silver and zinc for purposes of weighted average composite intercept calculations.*

[2] Drill hole CC25_039 contained two intervals where samples could not be obtained due to loss of recovery during drilling. These intervals occur from 121.00-121.6m (0.6m) and 175.10-177.1m (2.00m). These intervales occur internal to mineralized core runs and have been included in composite calculations but assigned zero assay values for copper, gold, silver and zinc for purposes of weighted average composite intercept calculations.
